INDICATIONS

Vitiligo, psoriasis, seborrheic dermatitis, atopic dermatitis, allergic dermatitis and other dermatitis, pityriasis rosea, urticaria, generalized and chronic eczema, and skin pruritus, etc.

TREATMENT PRINCIPLE

Cl atoms and Xe atoms in the sealed handpiece form the unstable XeCl excimer under the action of high frequency electric field, and this excimer is extremely unstable to naturally radiate 308 nm single wavelength excimer light in the process of transferring from quasi-molecular state into atomic state, which is mainly used for psoriasis, vitiligo and other diseases treatment.
